## 2018/2019

The regular season has come to a close and the final rankings of forecasters' projections have been calculated. A group of familiar faces can be found at the top of the rankings, which are available in full on the following pages. In the 2018/19 season I compared and analyzed 19 forecasters' projections (the most to date). As always, FantasyRef.ca strives to provide fantasy hockey poolers with an accurate and unbiased comparison and evaluation of forecasters' NHL projections each season.

### The Rankings

The rankings were determined using the algorithm created by FantasyRef.ca. It can be found at <http://fantasyref.ca/methodology/the-calculations>. Similar to previous years, rankings are created based on three characteristics: Statistical Category, Sample Size, and Total v. Rank. As all pools are set up differently, our rankings aim to meet the diverse needs of the many fantasy hockey pools.

For skater projections, rankings are provided for four statistical categories: Points, Points per Game, Goals, and Assists. For each of these categories, the forecasters' Top 300, Top 200, and Top 100 projections were compared. If a forecaster had less than the required

number of projections, they were omitted from that category's comparison. For example, some of the forecasters I evaluated had below 300 skater projections and were excluded from the Top 300 ranking calculations.

For goaltender projections, rankings are provided for two statistical categories: Wins and Shutouts. For each category, forecasters' Top 40 projections were evaluated. Rankings of forecasters' Top 20 and Top 10 projections were also ranked, but solely on order of increasing average error in the projections, not by the algorithm.

Finally, for each sample size and statistical category, forecasters were ranked on their ability to project the players' overall totals and the order (rank) that the players would finish.

When FantasyRef was created in 2015, one of the goals was to provide an overall ranking and determine the best fantasy hockey forecaster each season. It was possible for the 15/16 season as all forecasters evaluated had projections for the stats (P, G, A, W, SO) and sample size (Top 300, Top 40) being compared. This is not the same situation today. The rankings have grown to include 19 different forecasters with varying sets of

projections, making declaring an overall rank unfair. It is up to the user to determine which rankings and analysis is useful for making those important decisions to help you win your pool!

### 2019 Fantasy Ref Consumer Report

There is much more to FantasyRef than just an accurate comparison and evaluation of forecaster projections. You can find analysis of projections, tools to create and manage your own projections, and base projections for the upcoming season. Also, I am very happy to announce that FantasyRef is going to be putting together its first complete Fantasy Hockey Consumer Report. It is going to be chock-full of data, analysis, and rankings to help you make the best decisions for the 2019/2020 season. A draft table of contents is provided after the rankings. You can expect this to be made available for download in late June 2019. Right now you can pre-order your copy at a discounted rate of \$3.99 by going to <http://fantasyref.ca/presale>.

Enjoy,  
Jeff Clubine
